

African Mahogany Rift and Quarter Weathered Silvergrey

We can't copy nature. This natural grey driftwood look can only be achieved by outdoor weathering. When newly installed, our decking is orange-brown. With a bit of help of our Deckfresh finish, this wood weathers out to a sustainable silky silver-grey after just a few months of exposure to rain and sun. This look works very well on long planks for decking and walls. This finish needs rain and sun and doesn't work in the interior.

Species	African Mahogany
Finish*	Natural unfinished surface
Origin	True mahogany (Sipo, Sapele or Khaya) from responsibly managed forests in Western Africa.
Maintenance	This natural patina is low maintenance on decks or walls. If cleaned from time to time with water with our Deckfresh finish, the dry grey surface remains protected against algae and keeps its pure weathered look.
Spot repair and Refinish	Any surface damage needs only some sanding, as the bare wood will quickly weather out to grey if exposed to sun and rain.

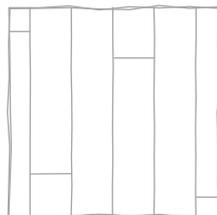

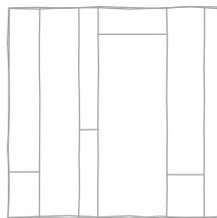

Structure**

Solid: 19.5 +/- 0.5 mm

Recommended patterns

*) Whilst our sampling and photography endeavours to show grain and colour as natural as possible, a sample or photo are never an exact representation of an entire floor. Wood being a natural material, variation in colour and grain exists, floors may change appearance over time through exposure to light, wear and tear and maintenance.

**) Prefinishing of solid floors may be subject to more strict recommendations for limited board dimensions and climate control. Read further on the next page.
